

For MAXILLA + MANDIBLE MODELS

Allosaurus Copy

The *Allosaurus* is a fierce meat-eating predator, related to the vicious *Tyrannosaurus rex*, who lived over 140 million years ago. With neck craned and body low to the ground, the running *Allosaurus* readies itself to lunge at its prey. This bronze model is based on the mount at the American Museum of Natural History in New York City, which depicts a fifty foot mother *Barosaurus* rearing up on her hind legs to protect her baby from the attacking *Allosaurus*.

Barosaurus Copy

The giant *Barosaurus* belongs to a group of immense plant-eating dinosaurs, the sauropods, which includes the largest creatures ever to have roamed the land. The adult *Barosaurus* is portrayed here, rearing up on her hind legs to defend her baby against an attacking *Allosaurus*. She is at the point of dropping down on top of the *Allosaurus* in an attempt to crush it. This bronze model is based on the mount at the American Museum of Natural History in New York City.
